

PromptWars x BRAIN DYP COEI

✦ Hackathon Guide Book

PromptWars

Participant Project Building Guide

A simple guide for first-year students

Problem → Build with AI → GitHub → Deploy → Submit → LinkedIn

The Basic Flow

READ THE PROBLEM → PLAN → BUILD → TEST → GITHUB → DEPLOY → SUBMIT → LINKEDIN

Before the Event

- Install Google Antigravity.
- Install Git.
- Create/sign in to your GitHub account.
- Create/sign in to your Vercel account.
- Keep your laptop, charger and internet ready.

1. Understand the Problem

When the problem statement is given, first understand it before asking AI to build anything.

Write These 4 Things

- Problem — What is wrong or difficult today?
- User — Who will use your solution?
- Solution — What will your project do?
- Features — What are the 3–5 most important things it must do?

2. Set Up Google Antigravity

Antigravity is the main AI building tool introduced in the PromptWars organizer deck. It lets you describe what you want and helps create the project.

Download

Official Antigravity Download

<https://antigravity.google/download>

Installation

1. Open the download link.
2. Choose Windows, macOS or Linux.
3. Download the installer.
4. Open the installer and complete installation.
5. Open Antigravity and sign in with your Google account.

Create Your First Project

6. Open Antigravity.
7. Click the folder + icon / New Project.
8. Create a new folder, for example: PromptWars-Project.
9. Add the folder to your project.
10. Open the Agent/Side Panel.

3. ✨ Give Antigravity Your Prompt

Think of a prompt as an instruction you give to the AI. Be clear about what you want.

First Prompt — Plan

Analyze this problem statement and create a simple MVP plan.

Problem Statement:

[PASTE THE GIVEN PROBLEM]

Tell me:

1. Target user
2. Problem
3. Solution
4. 3-5 core features
5. Pages/screens needed
6. Recommended technology

Second Prompt — Build

Now build the MVP from the approved plan.

Create a clean, responsive interface and make the core features work. Keep the project simple and focused on the problem statement.

Then Ask AI to Test

Test the project and check the main user flow. Find broken buttons, errors, missing features and responsive design problems. Fix the important issues.

Simple Rule

PROMPT → CHECK THE RESULT → ASK FOR CHANGES → TEST AGAIN

4. 🛠️ Test Your Project

- Open every important page.
- Click the main buttons.
- Try the main feature from start to finish.
- Check the project on a smaller screen.
- Fix important errors before moving to GitHub.

Don't Forget

Never assume the AI-generated project is correct. You must open it and test it yourself.

* Install and Set Up Git

Git helps you save your project and upload it to GitHub. You mainly need Git to run a few commands in the terminal.

Setup Of Git

Install Git on Windows

- 👉 Open the Git download link.
- 👉 Download the Windows installer.
- 👉 Run the installer.
- 👉 Keep the default options unless you know what to change.
- 👉 Finish the installation.
- 👉 Open Command Prompt, PowerShell or the Antigravity terminal.

Check if Git Works

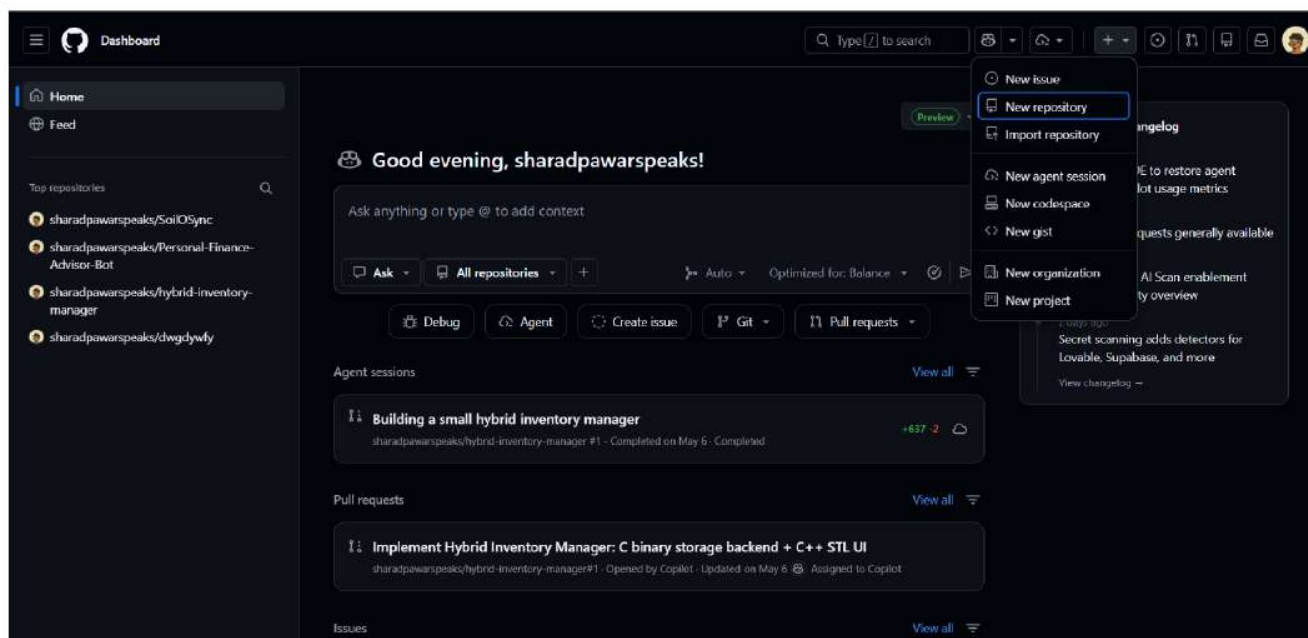

```
git --version
```

If you see a Git version number, Git is installed correctly.

5: - How to create Repository in GitHub

Upload Your Project to GitHub

- 👉 Go to GitHub and create a new repository.

👉 Give it a simple name, such as promptwars-project.

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1 General

Owner * sharadpawarspeaks / Repository name * PROMPT-WARS
PROMPT-WARS is available.

Great repository names are short and memorable. How about [curly-brussels](#)?

Description
0 / 140 characters

2 Configuration

Choose visibility * Public
Choose who can see and commit to this repository

Add README
READMEs can be used as longer descriptions. [About READMEs](#) Off

Add .gitignore
.gitignore tells git which files not to track. [About ignoring files](#) No .gitignore

Add license
Licenses explain how others can use your code. [About licenses](#) No license

👉 Copy the code and Paste to Antigravity AI Agent For Uploading Project to GitHub.

Add a README file and start coding in a secure, configurable, and dedicated development environment. [Create a codespace](#)

Search for people using their GitHub username or email address. [Invite collaborators](#)

Quick setup — if you've done this kind of thing before

[Set up in GitHub Desktop](#) or [HTTPS](#) [SSH](#) <https://github.com/sharadpawarspeaks/PROMPT-WARS.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

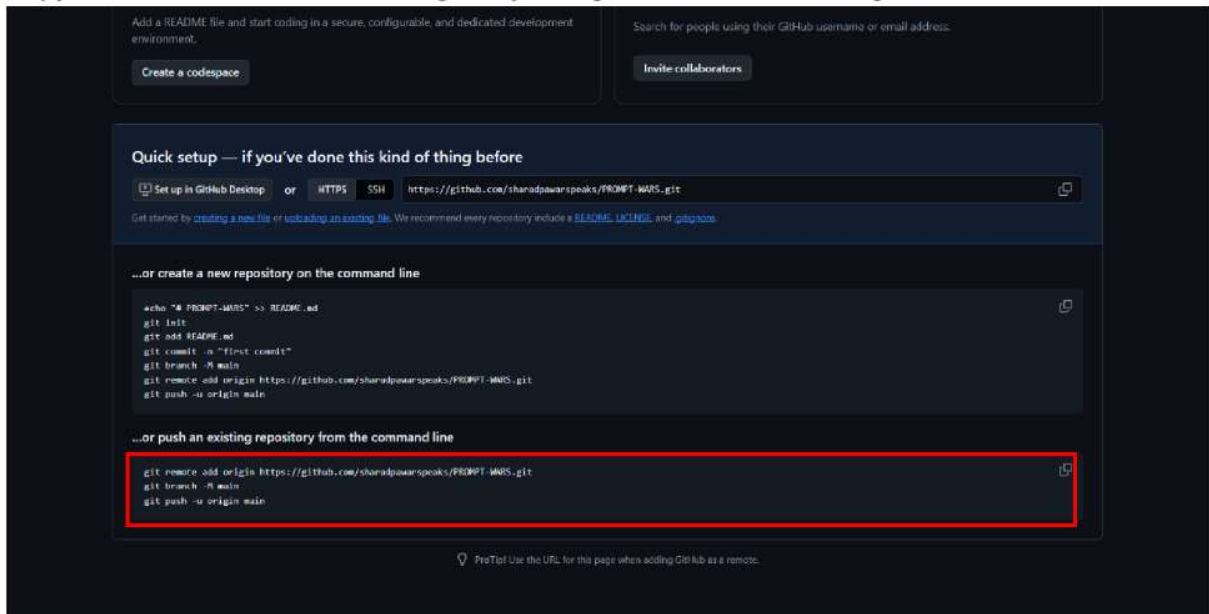

```
echo "# PROMPT-WARS" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/sharadpawarspeaks/PROMPT-WARS.git
git push -u origin main
```

...or push an existing repository from the command line

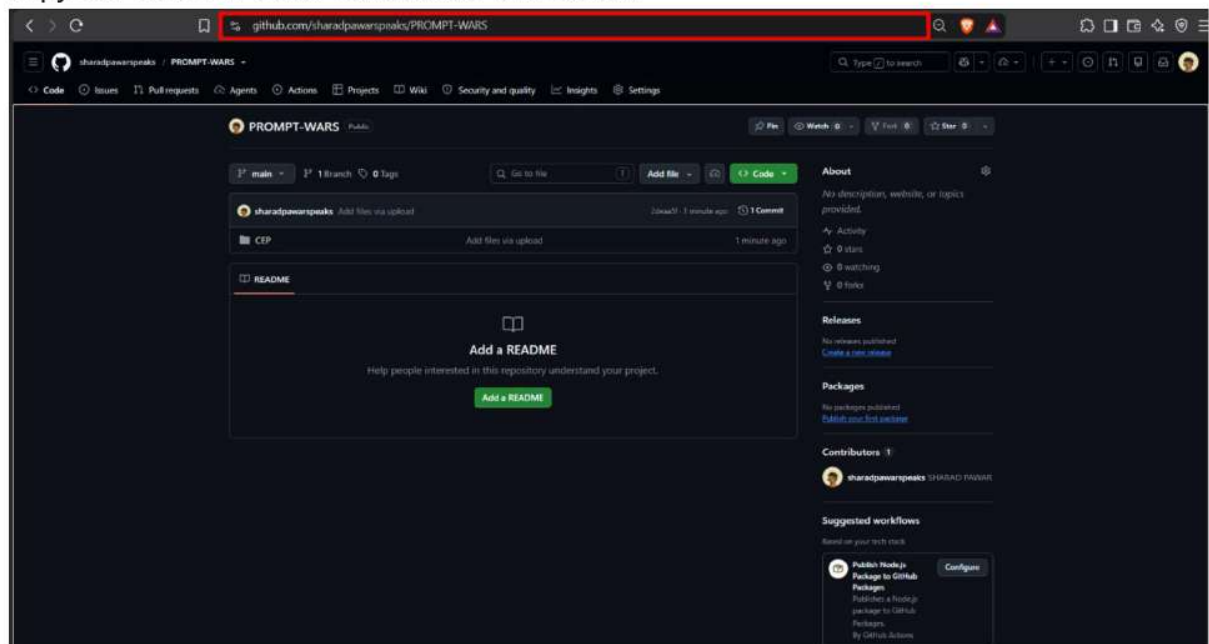

```
git remote add origin https://github.com/sharadpawarspeaks/PROMPT-WARS.git
git branch -M main
git push -u origin main
```

ProTip! Use the URL for this page when adding GitHub as a remote.

👉 Copy the code and Paste to Antigravity AI Agent to commit changes.

👉 Copy the Link and Paste to Initiative Dashboard.

⚠️ IMPORTANT — NEVER UPLOAD API KEYS TO GITHUB

Never upload your API keys, passwords, or other secret credentials to GitHub.

6. 🐙 Deploy Your Project on Vercel

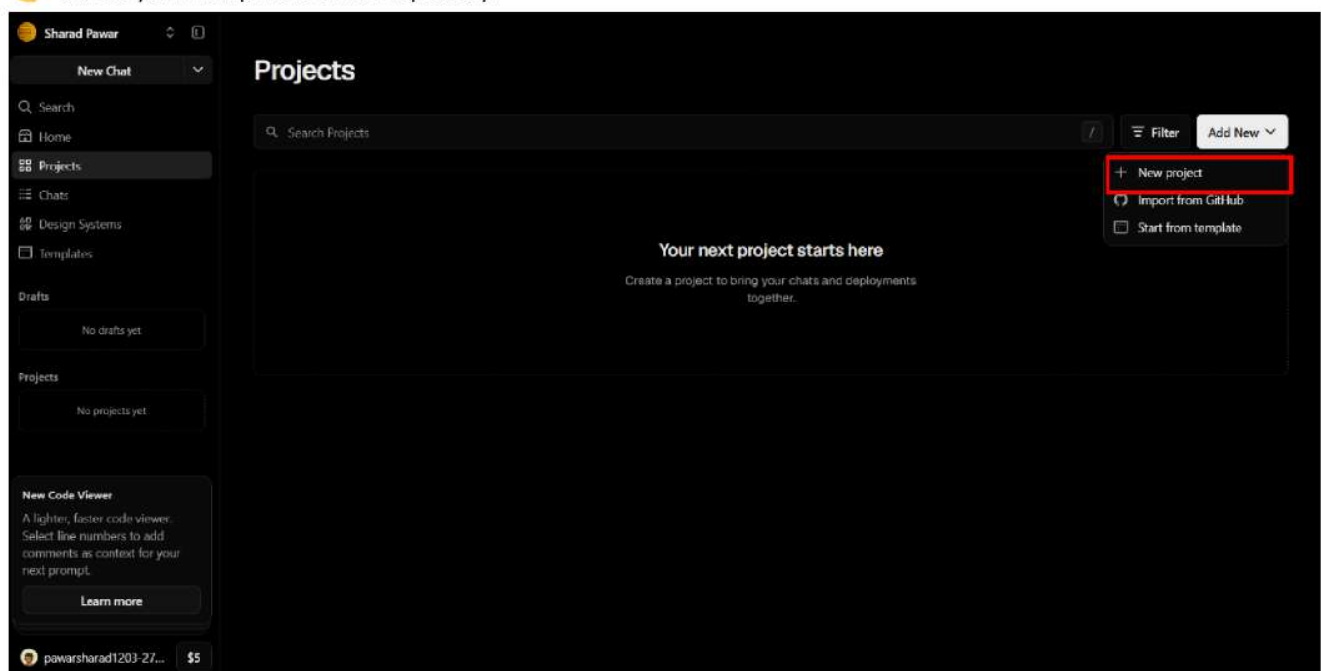

Deployment means putting your project on the internet so other people can open it with a link.

Step 1 — Create / Open Vercel

Vercel

<https://vercel.com/>

- 👉 Sign in with GitHub.
- 👉 Open the Vercel Dashboard.
- 👉 Click Add New → Project.
- 👉 Select Import Git Repository.
- 👉 Choose your PromptWars GitHub repository.

Step 2 — Deploy

- 👉 Check the project settings.
- 👉 Click Deploy.
- 👉 Wait for Vercel to finish building the project.
- 👉 Open the generated live URL.

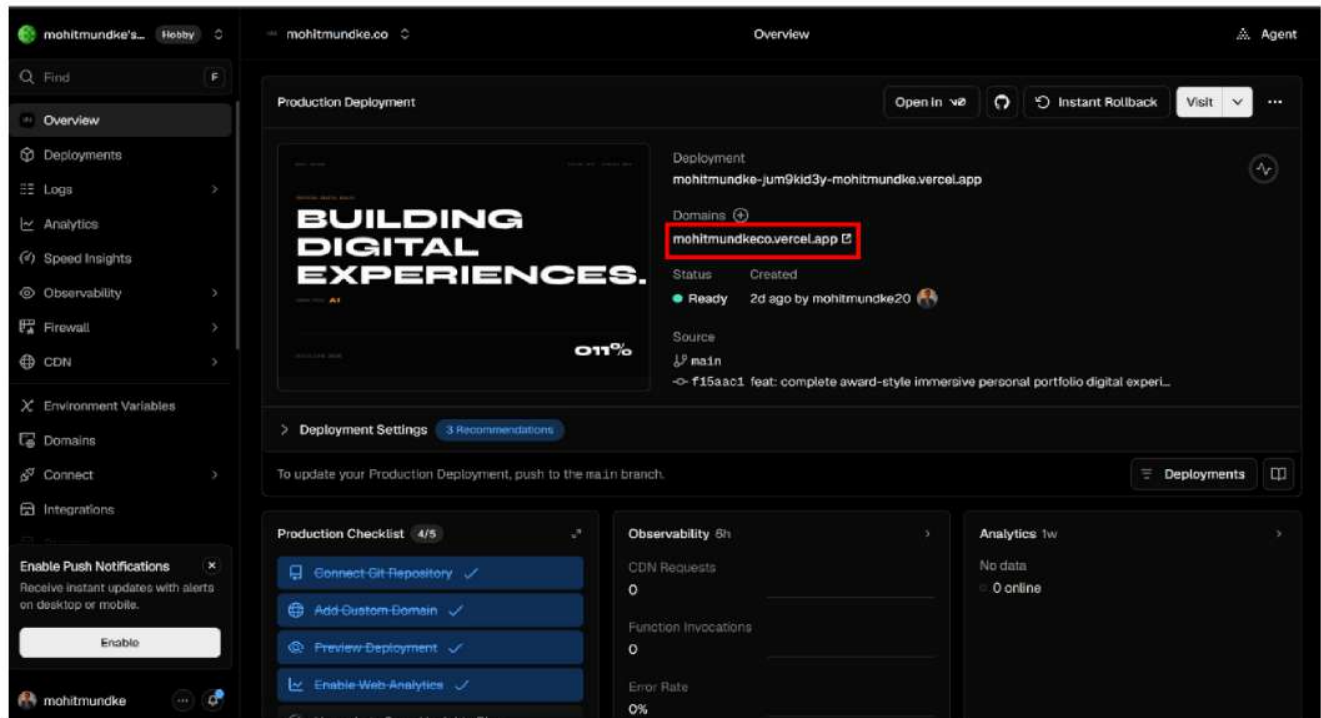

Step 3 — Test the Live Website

- ❖ Website opens
- ❖ Main feature works
- ❖ Buttons and navigation work
- ❖ API/AI features work, if used
- ❖ No major errors

Step 4 — Copy Your Live Link

Your link will normally look similar to:

<https://your-project-name.vercel.app>

If You Change the Code

Push the updated code to GitHub. Vercel can automatically create a new deployment from the connected repository.

EDIT → COMMIT → PUSH → VERCEL → UPDATED LIVE PROJECT

Final Check

Open the live link yourself before submitting it. A link that does not work can cause problems during evaluation.

7. Share Your Project on LinkedIn

After submitting, share your project on LinkedIn and tag these pages:

1. **BRAIN DYPCOEI**
<https://www.linkedin.com/company/brain-dypcoei/posts/?feedView=all>
2. **Dr. D. Y. Patil College of Engineering and Innovation, Talegaon (Varale)**
<https://www.linkedin.com/company/dr-d-y-patil-college-of-engineering-and-innovation-talegaon-varale/posts/?feedView=all>
3. **Hack2Skill**
<https://www.linkedin.com/company/hack2skill/>
4. **Google for Developers**
<https://www.linkedin.com/company/googlefordevelopers/>

Include in Your LinkedIn Post

- Project name
- Short description
- What problem you solved
- GitHub link
- Live project link
- Project screenshot & Photos

Final Checklist

- ✓ Project works
- ✓ GitHub repository is Public
- ✓ Latest code is pushed
- ✓ Vercel live link works
- ✓ Submission completed
- ✓ LinkedIn post published

FINAL FLOW: PROBLEM → BUILD → TEST → GITHUB → VERCEL → LINKEDIN → SUBMIT

8. Final Submission

The official PromptWars requirements ask participants to submit the following:

- Public GitHub Repository Link
- Deployed Project Link
- LinkedIn Post Link

Starting Date	Ending Date
09/10/2026 11:00:00 AM(IST)	09/10/2026 02:00:00 PM(IST)

Problem Statement * ⓘ

--Select an Option--

Public GitHub Repository Link *

Enter Public GitHub Repository Link

Deployed Link - (Cloud run URL) *

Enter Deployed Link - (Cloud run URL)

LinkedIn Post *

Enter LinkedIn Post

Note: URL must include https or http . example: https://linkedin.com/in/sample_user

Submit

IMPORTANT — SUBMISSION ATTEMPTS

You will have ONLY 2 attempts to submit your project links. Use your attempts carefully. Once both attempts are used, you will not get additional submission attempts.

Note:

The tools mentioned in this guide, such as Antigravity for project building and Vercel for deployment, are provided for reference only.

You are free to use any other tools, technologies, AI platforms, frameworks, or deployment services you are comfortable with, as long as your final project meets the hackathon requirements.

Build with the tools you know best! 🚀
